 - I-35 Thompson Hill – Ultra-Thin Bonded Wearing Course

• Ultra-Thin Bonded Wearing Course

- Is a pavement preservation technique that involves applying a thin layer of open-graded hot mix asphalt (HMA) over an existing pavement, typically using a single-pass application with a spray paver. This method seals cracks, improves skid resistance, and extends the life of the pavement. UTBWC is particularly effective on high-speed, high-volume roads.
